Last Updated Sunday, 19 November 2006

Joomla Most Popular Search Terms is a frontend component that allows you to show most search terms in your Joomla/Mambo site. It is configurable and customizable from administration panel easily. You can adjust column and line number, page and component title, line styles and number of terms that will be shown on component frontpage. Most search also has multi language support (currently supports English and German languages) so that you can easily adapt it to your website. Most search also has the ability to create SEO friendly pages: You can set meta description and meta keywords tag from the configuration section. Meta keywords are automatically selected from the beginning of the most search terms, so it is not necessary to enter meta keywords word by word.

Features:

- Easy customizable.
- Multilanguage support.
- Configuration panel.
- SEO support.
- Automatically checking new version. (User defined)

Installation:

Download zip file [here](#) and go to Joomla/Mambo admin panel. Point Installers/Components and select the zip file by clicking browse button. Make sure your /components and /administrator/components directories are writable. Click Upload File & Install button. If everything is alright, you will see a message explains that your component installation is successful. Go to component configuration panel from Components/Most Search/Configuration and make necessary changes. Please consider that in order to make changes in configuration, your configuration.php file must be writable in /administrator /components/ com_mostsearch directory. Before you see how your component are shown must enable search strings logging feature from Site / Global Configuration / Statistics since this feature is disabled in default Joomla/Mambo installation. Version : 1.0 beta Size: 51Kb
